

Document accessibility snapshot

Town of Fernwick (fictional)

Website: <https://www.fernwick.example/>

Prepared by Your Name, Document Accessibility Services on 7 October 2026

Summary

We found 14 documents (27 pages) linked from 9 pages of <https://www.fernwick.example/>. 9 of the 11 PDFs have no tags, so people using screen readers cannot move through their headings, lists or tables, and 1 is a scan with no real text. 3 files need fixing first because people use them to apply for a service or they are linked from your home page. We suggest fixing or converting 11 files and archiving or deleting 2 more, which you decide with your ADA coordinator.

Key numbers

What we counted	Number
Documents found	14
Total pages (slides and spreadsheet tabs included)	27
PDF files	11
Word files	1
Excel files	1
PowerPoint files	1
PDFs without tags (screen readers cannot follow their structure)	9
PDFs with scanned pages and no real text	1
Files without a proper title	8
PDF and Word files without a language setting	9
Files with fillable form fields	1
Exact duplicates	1
Broken links to documents	1
Links with unclear text, such as "click here"	2

Suggested action for each file

Every file is listed in the attached spreadsheet with a suggested action. These are suggestions only: you decide what happens to each file, and your ADA coordinator or lawyer decides whether any exception applies.

Suggested action	Files	Pages	What it means
Fix	10	21	Repair or rebuild the file so it works with screen readers, then a person checks it.
Convert to web page	1	1	Put the content on a normal web page instead of a document.
Archive	1	2	Old file. The client's ADA coordinator or lawyer decides if it can move to an archive section.

Suggested action	Files	Pages	What it means
Delete	1	2	Duplicate or no longer needed. Remove it and fix the links.
Keep (check only)	1	1	Basic checks passed. A person still checks it before it counts as done.

Files to fix first

These files are used to apply for or use a service, or are linked from your home page.

File	Pages	What we found	Suggested action
building-permit-application.pdf	2	Not tagged (screen readers get no structure); No language set; 14 fillable form fields (14 with no name for screen readers)	Fix
volunteer-signup-form.docx	1	No title; No heading styles used; 1 image without alt text (or with a file name as alt text); 1 table without a header row	Fix
water-quality-report-2025.pdf	1	No headings in the tags; 1 image without alt text; Tables have no header cells	Fix

Estimate for fixing

11 files (22 pages) are marked Fix or Convert to web page. At \$5 to \$25 per page, fixing them would cost about \$110 to \$550. This is an estimate. We send a fixed quote after you decide which files to keep, archive or delete. Files we can fix from the original Word files cost less.

Why this matters

The US Justice Department's rule under Title II of the Americans with Disabilities Act (ADA) requires state and local governments, including school districts, public colleges and special districts, to make their web content meet WCAG 2.1 Level AA. Documents posted online, such as PDFs, Word files and spreadsheets, are part of that web content.

Deadlines as reported when this snapshot was written (please verify the current dates, as they have changed before): 26 April 2027 for public entities serving 50,000 or more people, and 26 April 2028 for smaller ones. Special district governments were grouped with the smaller entities in the 2024 rule.

Accessible documents also help everyone else: people with low vision, people using a phone, and anyone who needs to search, copy or translate the text.

What this snapshot is and is not

- It lists the documents we could reach by following links from <https://www.fernwick.example/>, up to 3 clicks deep, on 7 October 2026. Files behind logins, inside search tools or loaded by scripts may be missing.
- The checks are automated. They find common problems such as missing tags, scanned pages, and missing titles or language settings. They cannot tell whether the reading order, alt text or tables make sense. A person checks those when the files are fixed.
- It is not a legal opinion, a full audit of your website, or a certification. We do not certify files as "ADA compliant".
- Your ADA coordinator or lawyer decides whether any exception, such as the one for archived content, applies to a file.

Next steps

1. Review the spreadsheet and mark each file: keep, fix, convert, archive or delete.
2. Send us the original Word files where you have them. Fixing from the source is faster and costs less.
3. We send a fixed quote. After you approve it, we fix the files, test each one with automated checks and a screen reader, and give you a log of what we did and the test results.

How we checked

We read 9 web pages on 7 October 2026, following your site's robots.txt rules and leaving at least 0.2 seconds between requests. For each file we checked tags, real text versus scanned images, title, language, form fields, bookmarks and security settings, using open-source tools.
