

Business Continuity and Disaster Recovery Plan

FICTIONAL SAMPLE. Quarterhour, Inc. is a made-up company used to demonstrate this kit. Any resemblance to a real company is coincidental.

Document ID	QH-POL-08
Version	1.0
Owner	Dana Whitfield, CTO
Approved by	Maya Okafor, CEO
Last reviewed	25 June 2026
Review cycle	At least annually

1. Purpose

This plan explains how Quarterhour keeps its service running, or restores it quickly, after a serious disruption.

2. Critical services

The Quarterhour web application, booking pages, public API and appointment reminder delivery.

3. Recovery objectives

- Recovery time objective (RTO): 8 hours.
- Recovery point objective (RPO): 1 hour.

4. Resilience

The application runs on AWS across two availability zones in the us-east-1 region. The database uses Amazon RDS Multi-AZ with automatic failover.

5. Disaster recovery

If the us-east-1 region becomes unavailable, the team rebuilds the service in the us-west-2 region from the cross-region backups described in the Backup and Recovery Policy, using infrastructure-as-code templates. The CTO decides when to start regional recovery.

6. People and workplace

Quarterhour is a remote-first company with no office. Staff can work from any location with internet access, so the loss of a workplace does not stop operations. At least two people can perform each critical task.

7. Communication

During an outage, updates are posted on the public status page and emailed to customer account administrators.

8. Testing

The disaster recovery procedure is tested at least once a year by restoring the service in us-west-2. This plan is reviewed every year and after each major incident.

9. Roles

The CTO leads recovery. The CEO leads communication with customers.
